

# PUSH PULL ATTACHMENTS KA

# Push Pull attachments - how it works

Goods on slip sheet

Grab the slip sheet

Pull onto plates while driving forward same time

Transport where needed

Put away

Extend scissor while reversing forklift

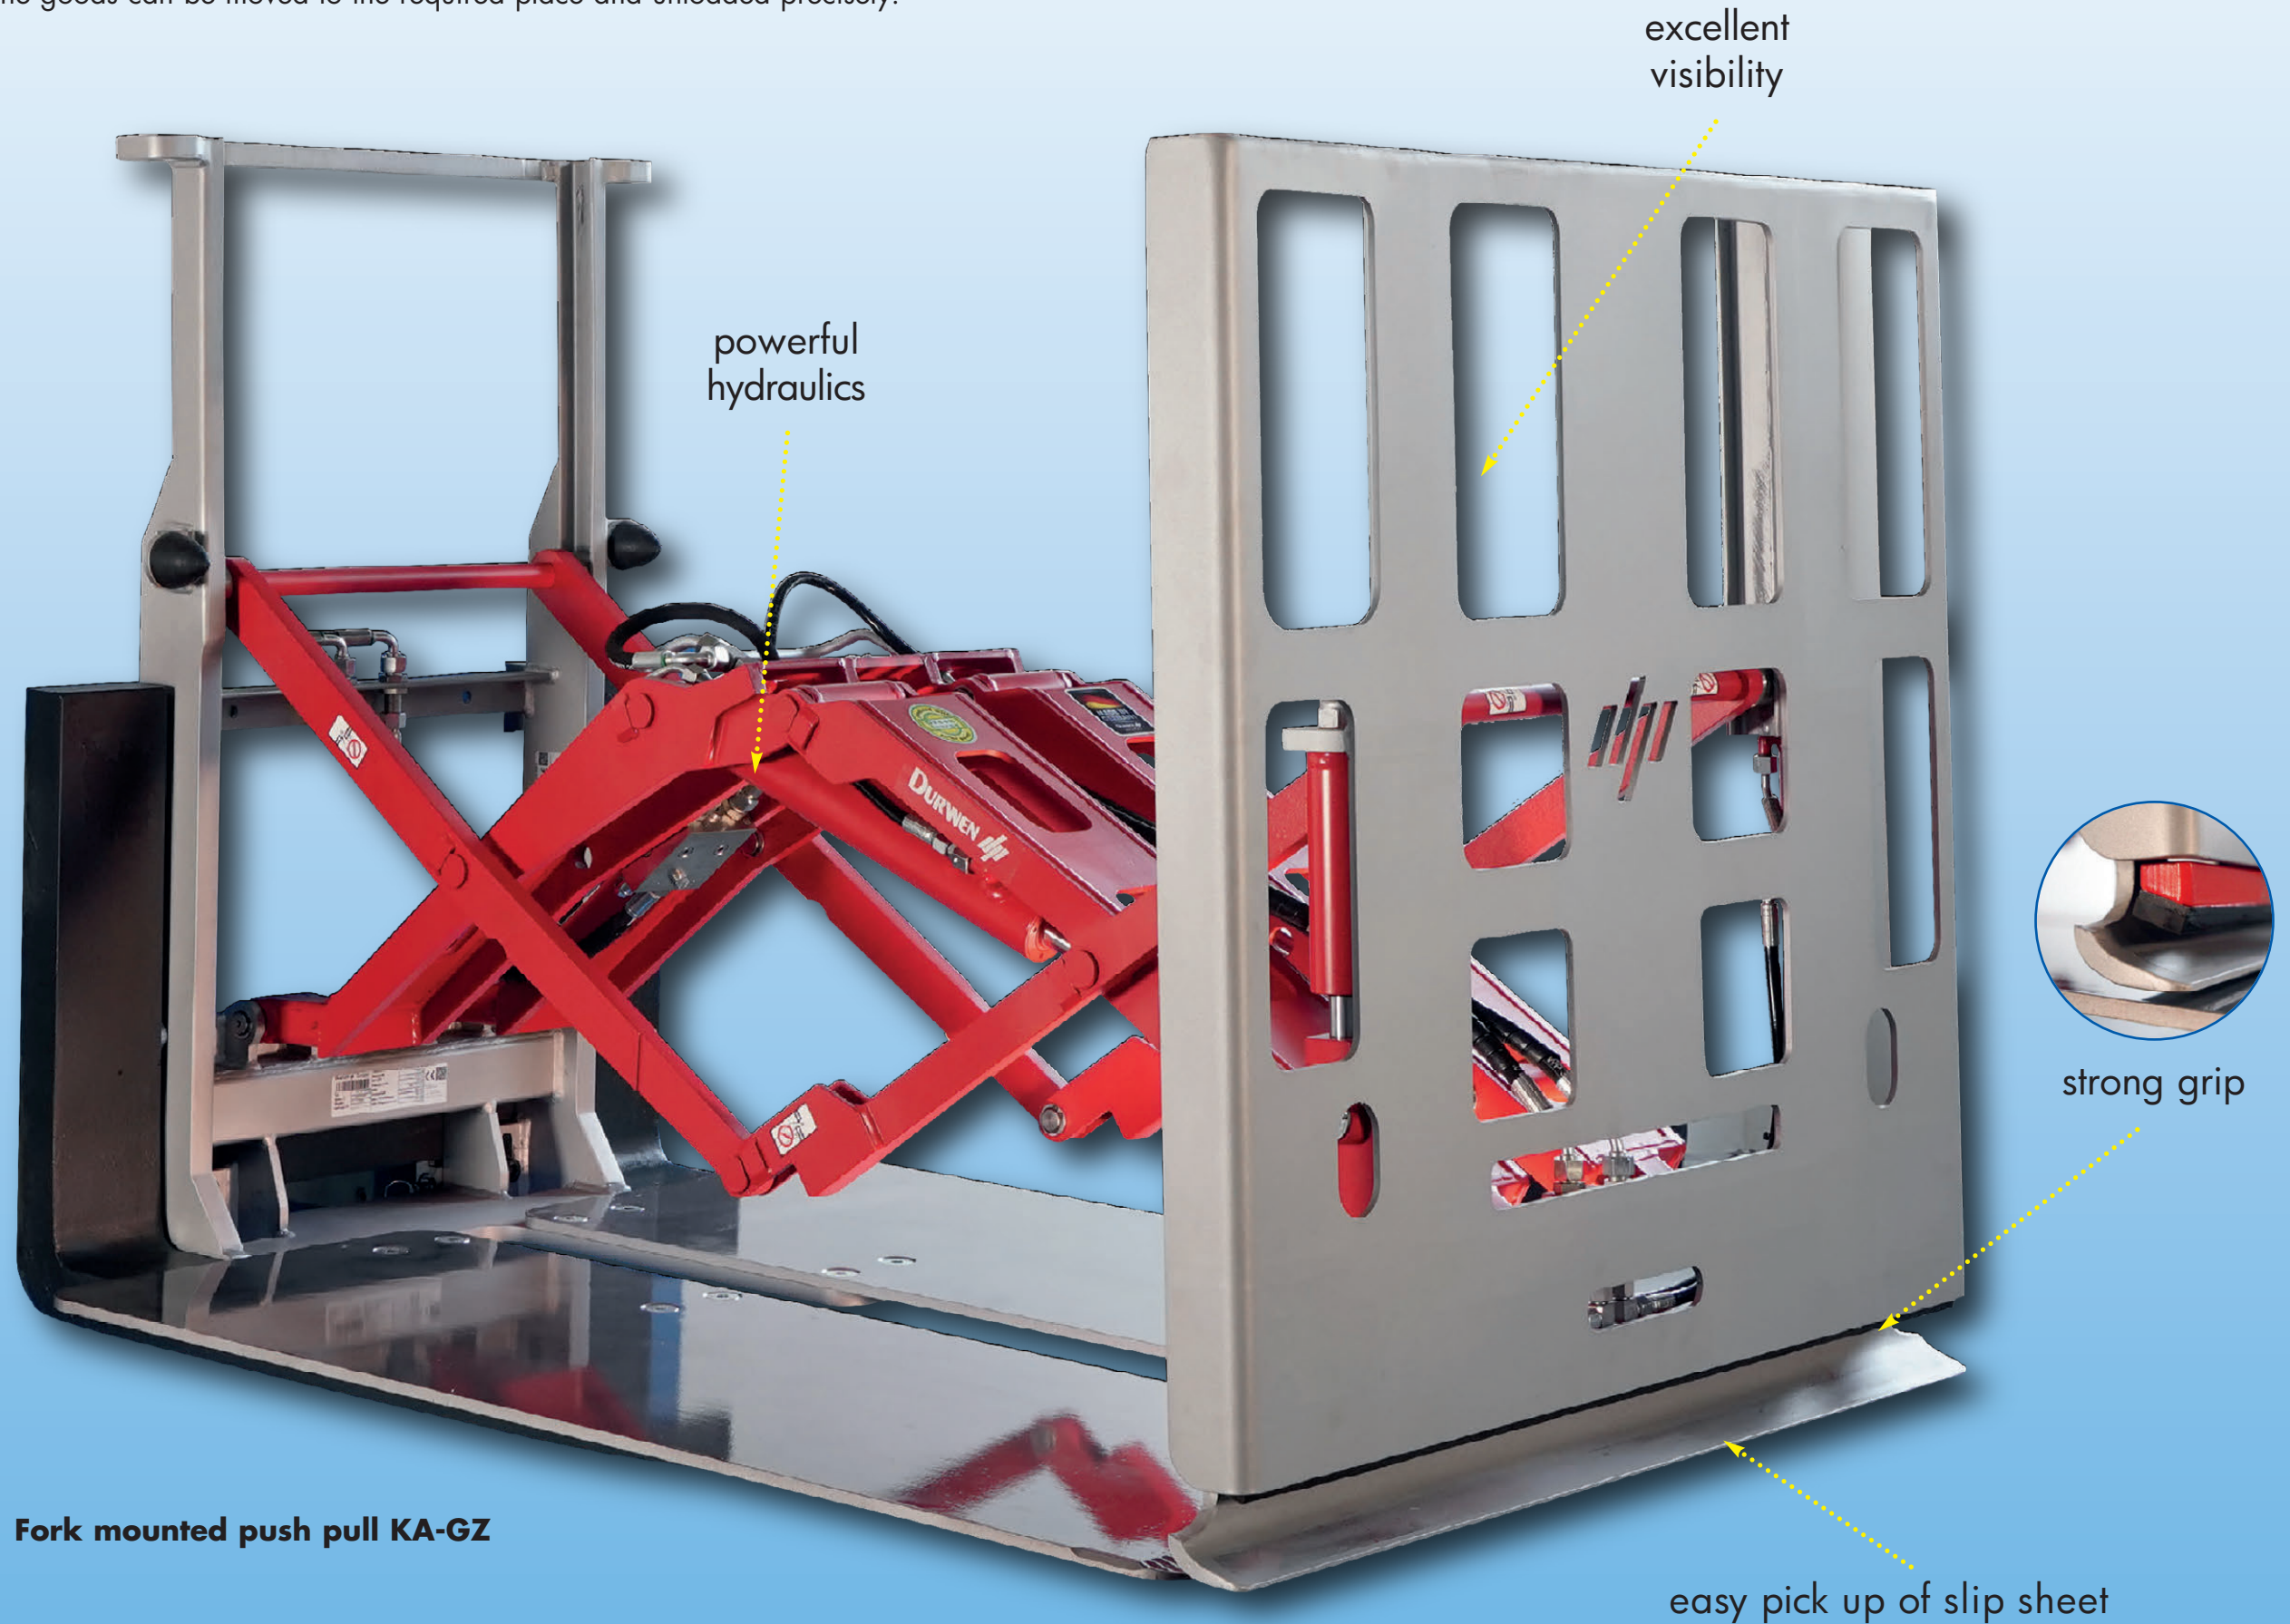

## Durwen Push Pull attachments KA

The **Durwen push pull** is designed to handle goods that are placed on slip sheets like cement bags, packaged food and beverages. Slip sheets are available in different forms, they are either fiber reinforced cardboard, plastic, or metal. Benefits are the low weight, they consume minimal space and are less cost per unit compared to pallets. The Durwen push pull **(KA)** grabs the slip sheet with a strong and secure mechanism underneath the push plate and pulls the goods onto the plates using sturdy scissor joints. Now the goods can be moved to the required place and unloaded precisely.

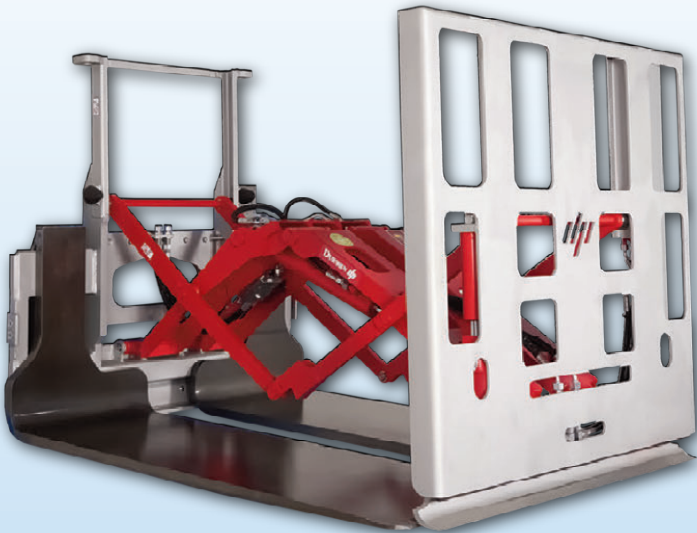

Durwen push pulls are available as quick change model with fork mounting. Installation possible in approx. 1 min (Video QR-Code). Another Option is the ISO carriage mounting. A sheet saver is available as well as a conversion KIT for use in combination with a backrest installed on your forklift. A pusher only **(AS)** is available in different configurations as well.

Push Pull  
installation video:
